memo

Reference letter concerning products and services
obtained from HELZEL Messtechnik GmbH

Dear reader,

Our institute has purchased two WERA HF Radar Systems from HELZEL Messtechnik GmbH in 2015 for current monitoring around the Rotterdam harbor area. These measurements are used to study the near shore currents and to improve the hydrodynamic ocean current models. The HELZEL Messtechnik team installed the two systems in 2015 together with their Dutch partners. The operational maintenance is continuously carried out by HELZEL Messtechnik and their partners. The systems are operational since October 2015 with a data availability of more than 95 % during the entire period. We are very satisfied with the HELZEL products and services.

Best regards,

Pieter Haaring,

Service Manager direction Ontwikkeling Services Rijkswaterstaat (OSR),
Rijkswaterstaat Centrale Informatievoorziening (CIV)
